Project: What to include in your Final Project
Due Friday May 7, 2021 5:00pm

You may work with a partner on a project or not. If you work with a partner, you should turn in 1 copy of the exam with both partners names on the project. If you have any questions or problems, you can ask me or Gamze. Projects should be e-mailed to edpsy587@gmail.com

I have created a template for grading the projects with sections labeled according to each analysis that you are asked to report. Using headings for these items/analyses is a very good idea. Feedback on your exam will be e-mailed to you.

The following applies to most projects. I would like to see a complete and coherent analysis of data. You should report and/or describe

1. Research question(s) and/or goal(s) of study and analysis.
2. Describe the data (e.g., where and how was it collected, the variables and types, basic summary statistics, etc).
3. Exploratory analyses and what you learned from them.
4. Model fitting and refinement to arrive at a final model. Give tests and results for random and fixed effects. Include enough information so that I can see the process and logic that you used during this part of the analysis.
5. Examination of assumptions for the model that you choose.
6. A complete interpretation that addresses the question(s).
