

Embodied Learning Augmented through Simulation Theaters for
Interacting with Cross-Cutting Concepts in Science

Help us design future science education simulations!

Researchers at the University of Illinois at Urbana-Champaign are conducting a research study on how students use body movement to understand “big ideas” in science. Come to our lab at the **College of Education room 176 (1310 S. Sixth St., Champaign)** to participate with another student using our “simulation theater” to explore different science topics. The session is approximately 90 mins. and each participant will receive \$15 or class research credit (where applicable).

If you want to participate, just go to this website: elastics.education.illinois.edu. Click the **PARTICIPATE** tab at the top of the website. After answering a few questions, you will be able to select an appointment time. **If you have a friend you would like to participate with, make sure they sign up for the same time block.**
